# EmpSync for LGB

## What is EmpSync ?

EmpSync is an employee tracking app developed by team Front Yard with journey tracking, attendance tracking and leave tracking features.

## Proof of Concepts:

### Frontyard BI

Frontyard BI is a startup initiative to implement Business Intelligence to make business processes simple.

Intelligence is what we have and business is what you have, let's join our hands and make better business decisions. We are implementing Business Intelligence in industries. We have an efficient team to work with your data and can provide better insights!

Project name: LGB -1.o

## Overview of the Project:

- LGB 1.0 creates a portal for each and every sales person(employee).
- LGB 1.0 provides an interface for employee attendance and helps admin to monitor the attendance of the employees.
- LGB 1.0 provides an interface for tracking the sales person and helps admin to calculate the pay to be paid for salespersons.

## UX Designs

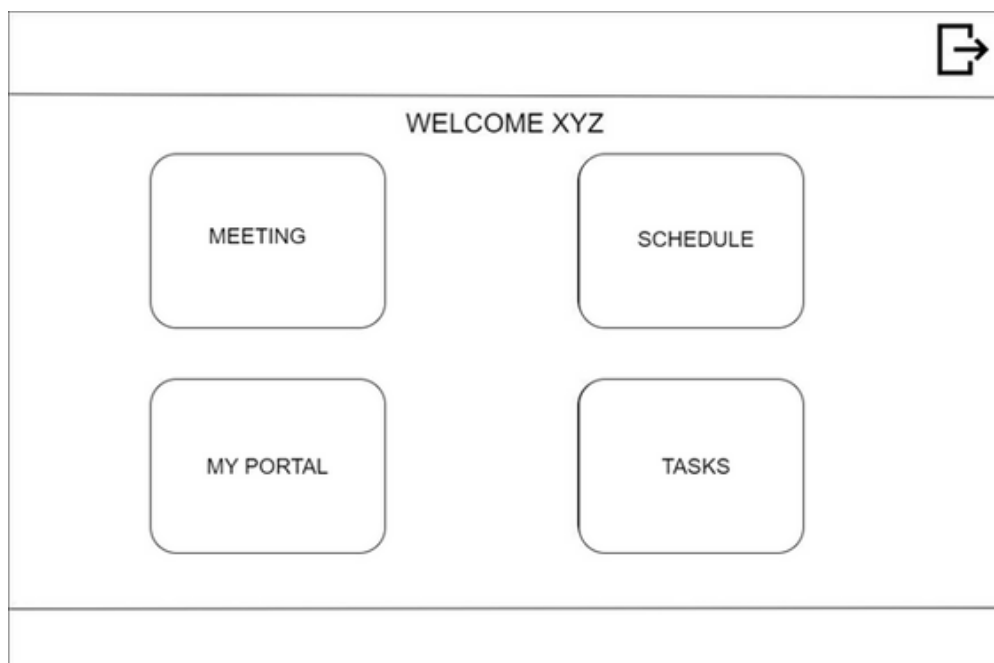

### Sales persons view

#### 1) Login page

The login page design features a header labeled "Login Page". Below the header, there are three input fields: "Username", "Password", and a "login" button. Below the "login" button, there is a link labeled "forget password?".

#### 2) Home page

The home page design features a header with a logo icon on the right. Below the header, there is a greeting "WELCOME XYZ". The main content area contains four buttons arranged in a 2x2 grid: "MEETING", "SCHEDULE", "MY PORTAL", and "TASKS".

### 3) Journey Page

MEETING

ELIGIBLE MEANS OF TRANSPORT

BIKE

CAR

TRAIN

BUS

INPUT

Type of CC based on vehicle

TICKET IMAGE UPLOAD

START

### 4) Leave page

SCHEDULE

No.of PL : 7/10  
No.of CL: 3/5  
No.of ML taken: 5

Next assigned date of work: dd/mm/yyyy

Reason box

Submit

Cancel

Apply leave

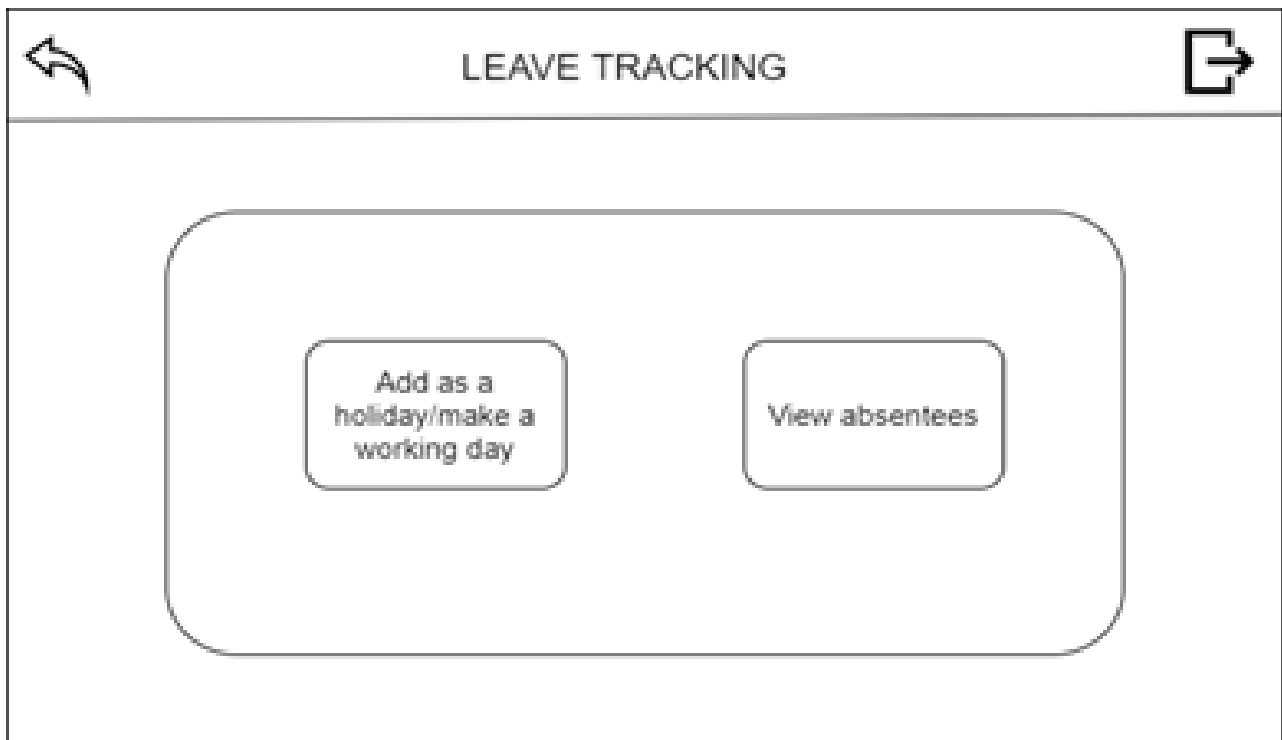

Cancel leave

## Admin View:

### 1) Home Page:

### 2) Leave tracking app

LEAVE TRACKING

PL

CL

ML

| NAME | REASON | TYPE |
|------|--------|------|
| XXX  | bbb    | PL   |
| YYY  | ccc    | PL   |
| ZZZ  | ddd    | CL   |
| AAA  | eee    | ML   |

## 2) Travel History

TRAVEL HISTORY

| TRAVEL ID | FROM DATE-TO DATE    | FROM PLACE-TO PLACE |
|-----------|----------------------|---------------------|
| 101       | 21/2/2020 -22/2/2020 | CBE TO TIRUPUR      |
| 102       | 21/2/2020 -22/2/2020 | CBE TO BLORE        |
|           |                      |                     |
|           |                      |                     |

## Summary:

### What has been done?

- Built a journey tracking feature with two categories own transport and public transport. Public transport options has a feature of uploading the ticket and own transport feature has the feature of calculating the distance and travel allowance. The both features have a way of conveying the journey end by means of mailing to the admin.
- Attendance tracking captures the time and location while logging in logging out for the day.
- Leave tracking feature finds the EL and CL available for that person along with history of leaves taken.
- Profile feature list the details of the person in the event of filling the asset details in the profile page.
- Login and sign up page comes with firebase authentication with unique ids with additional feature of forgot password.

### What needs to be done?

- -The admin view described in UX design is not being developed.

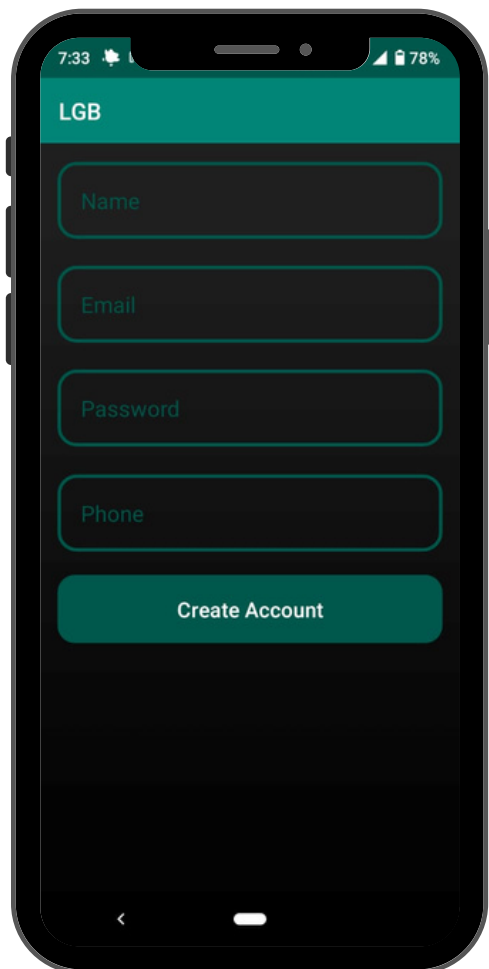

# Project plan detailing the individual modules

## 1) Login and Sign up actions

- Once a person signs up firebase automatically generates UID and provide authentication this is purely for security purpose.
- We also have forgotten the password feature.
- In order to make this forgot password feature useful, it is mandatory that we need set the security questions.
- We also provide a remember me check box which will avoid from asking the the username and password repeatedly

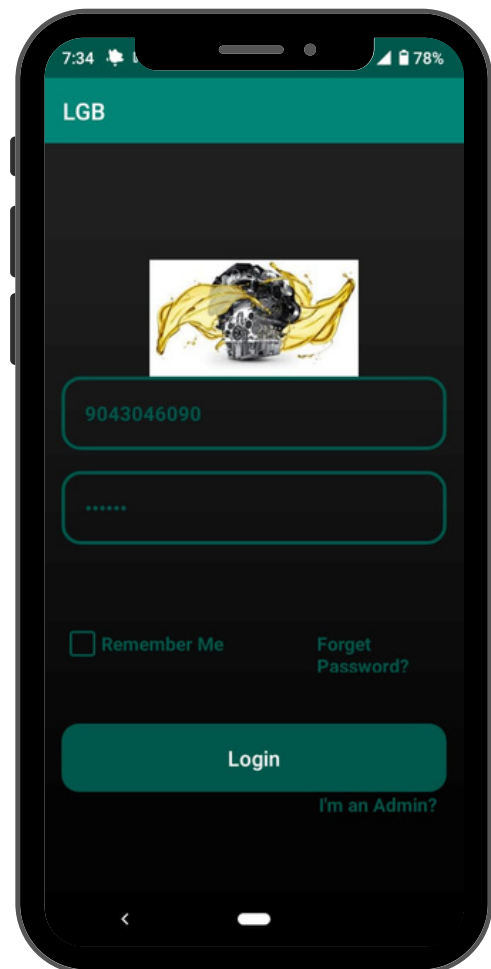

## Sub Modules

### I) Sign up page

A mobile app screenshot of the Sign up page. The page has a dark teal header with the text 'LGB'. Below the header, there are four input fields with labels: 'Name', 'Email', 'Password', and 'Phone'. At the bottom of the form is a large teal button labeled 'Create Account'. The status bar at the top shows the time as 7:33 and battery level at 78%.

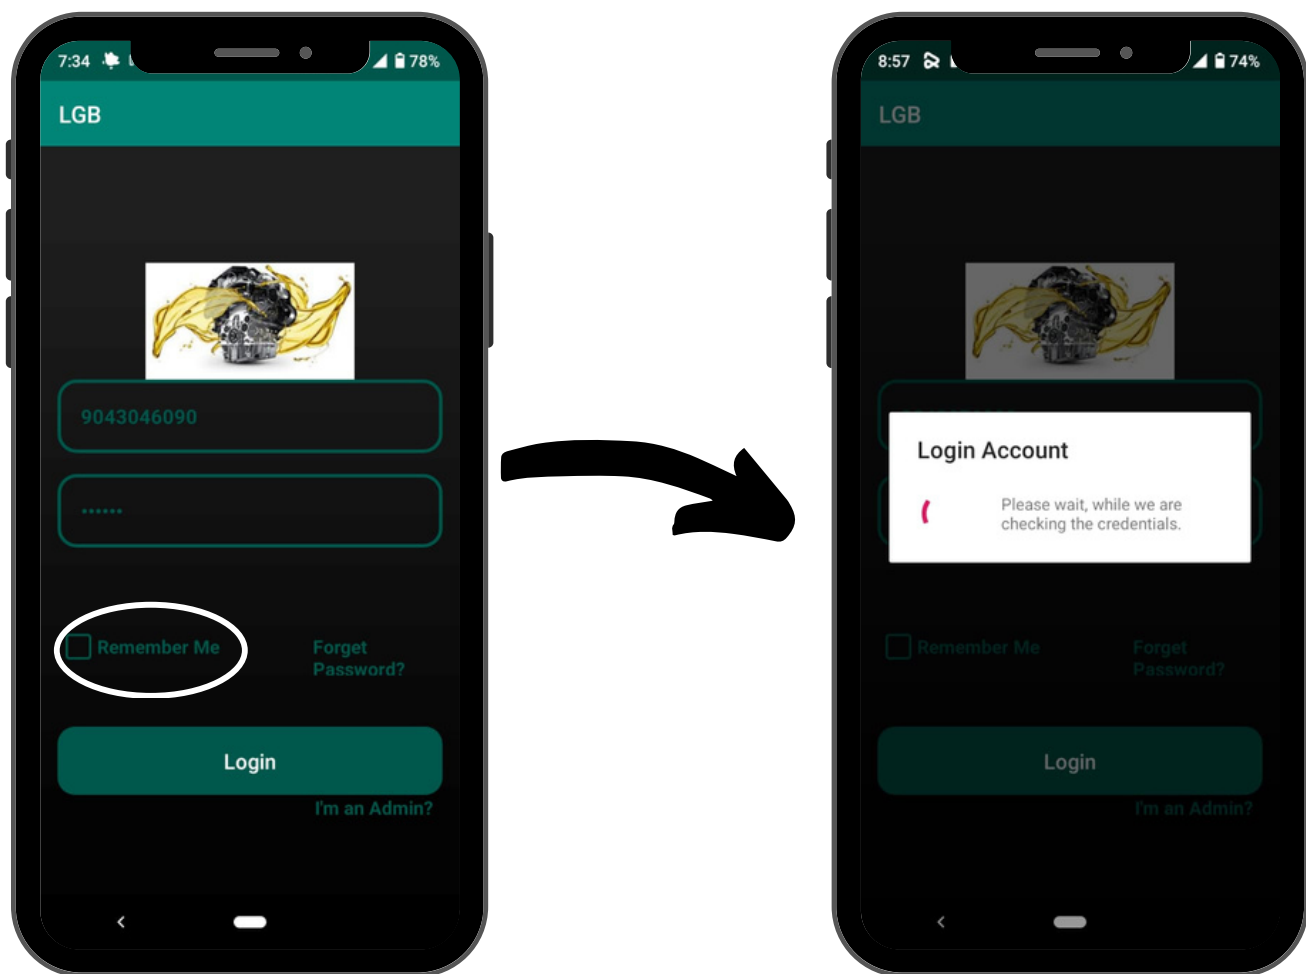

### II) Login page

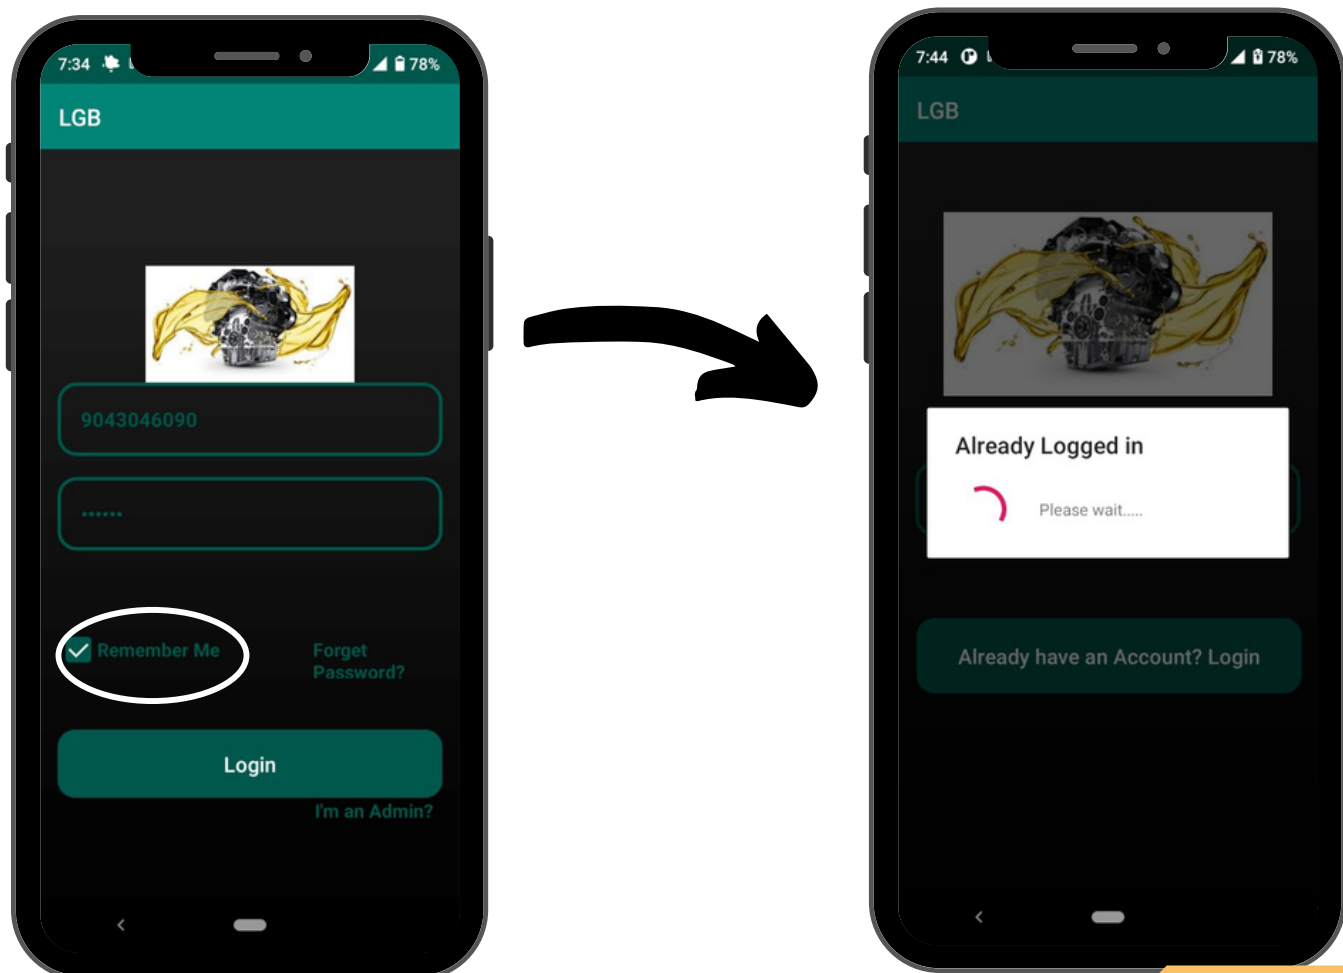

A mobile app screenshot of the Login page. The page has a dark teal header with the text 'LGB'. Below the header, there is a small image of a globe with yellow flames. Below the image are two input fields: the first contains the text '9043046090' and the second contains '\*\*\*\*\*'. Below the input fields are two links: 'Remember Me' with an unchecked checkbox and 'Forget Password?'. At the bottom is a large teal button labeled 'Login'. Below the button is a link labeled 'I'm an Admin?'. The status bar at the top shows the time as 7:34 and battery level at 78%.

### III) Without Remember me feature

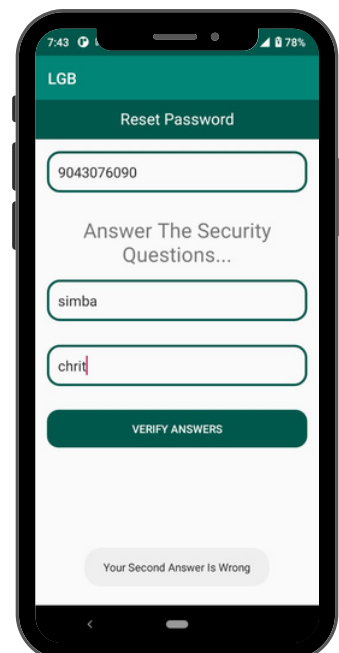

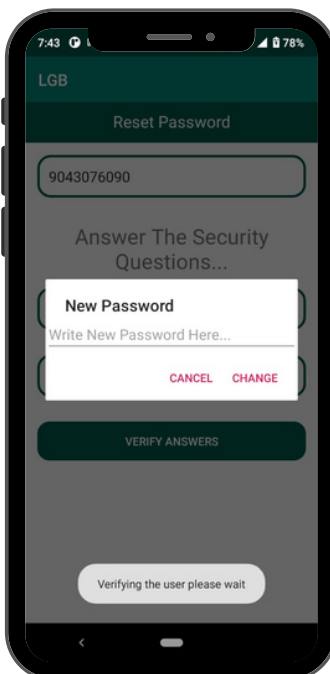

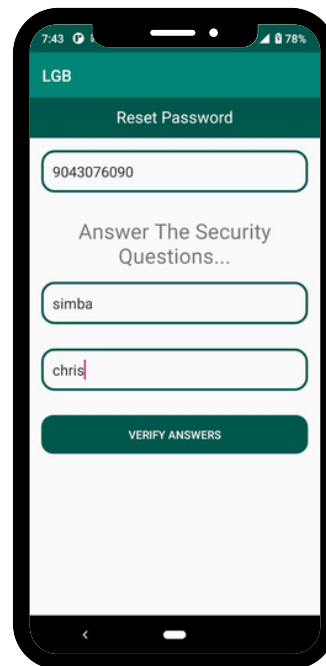

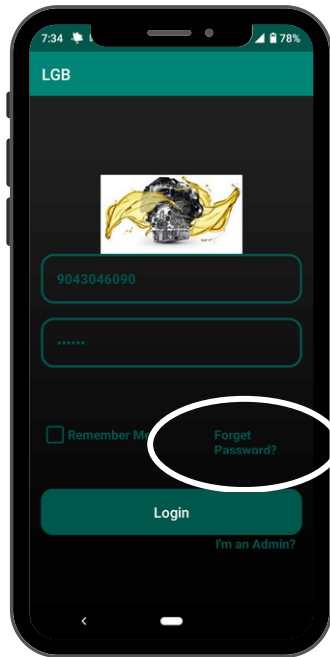

### IV) Remember me feature

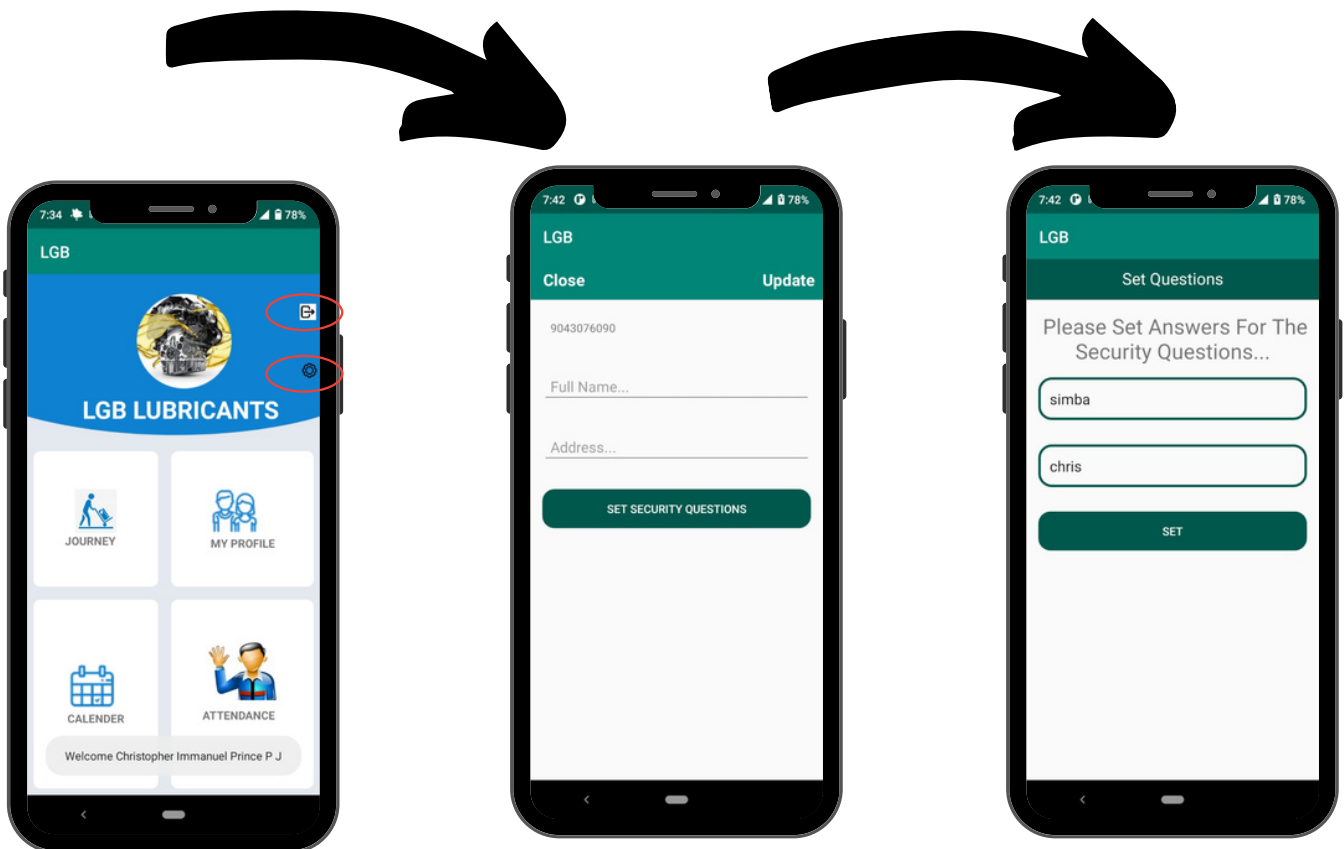

## v) Forget password feature

**Disclaimer:** We need to set the security questions in home page which is discussed in this document.

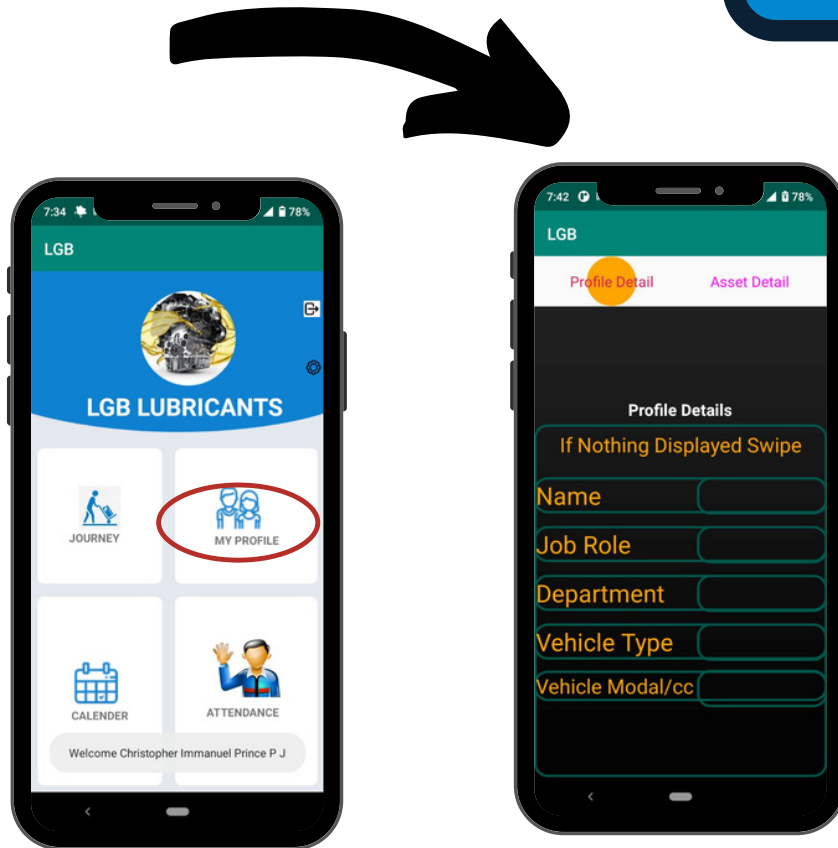

### 3) Home page

- The home page is the point of focus where we could find all the features and logout feature(one with small door symbol at top right corner).
- It also consists of an important feature of setting a security question (One small setting symbol at top right corner)which is quite mandatory for setting a new password.

## 4) Profile page

Profile feature list the details of the person in the event of filling the asset details in the profile page.

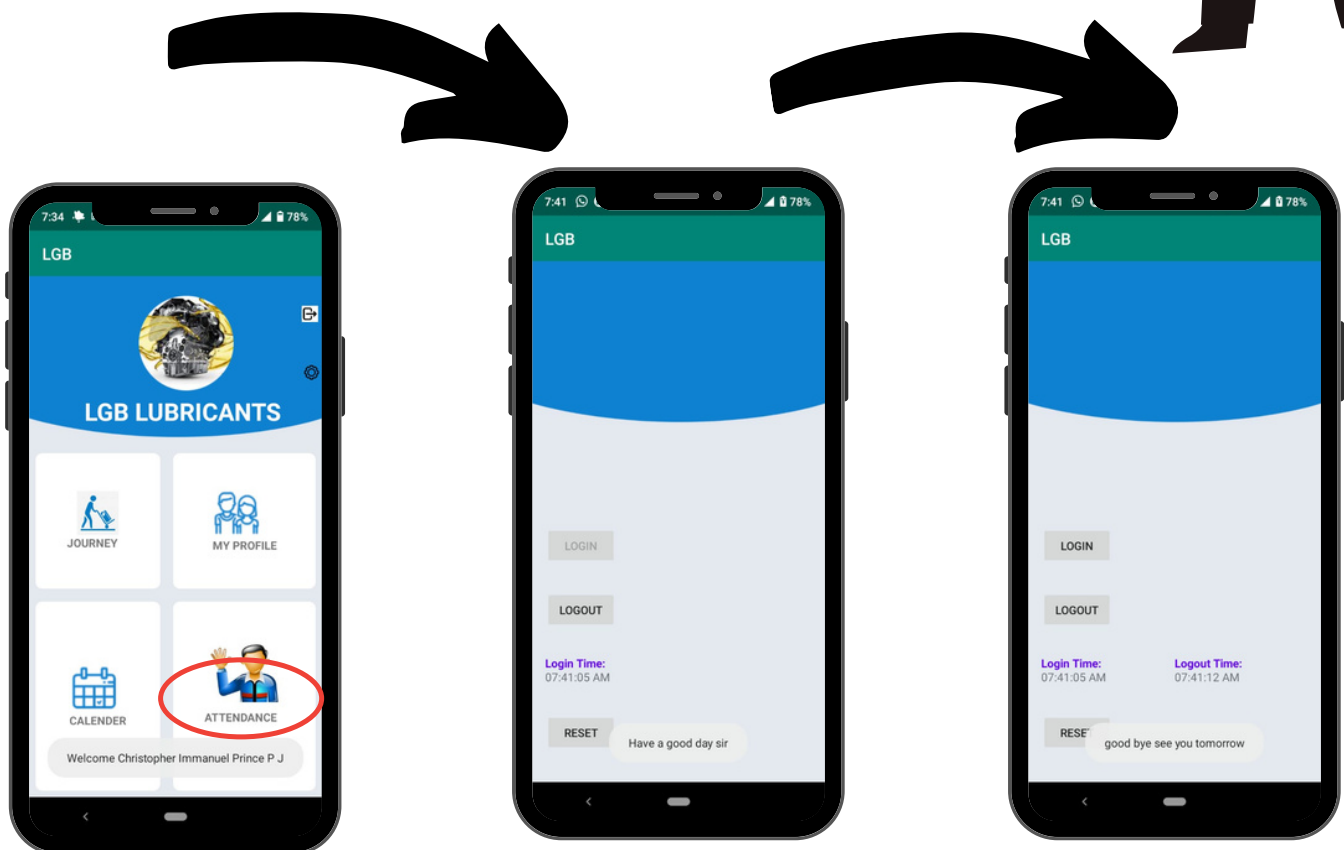

Asset Details is a single-time access tab where we fill in details about the vehicles we use, the department where we are and the designations, etc...

## 5) Attendance tracking

On entering the workplace, employees trigger the login button that saves the time of login and the location from where they log in.

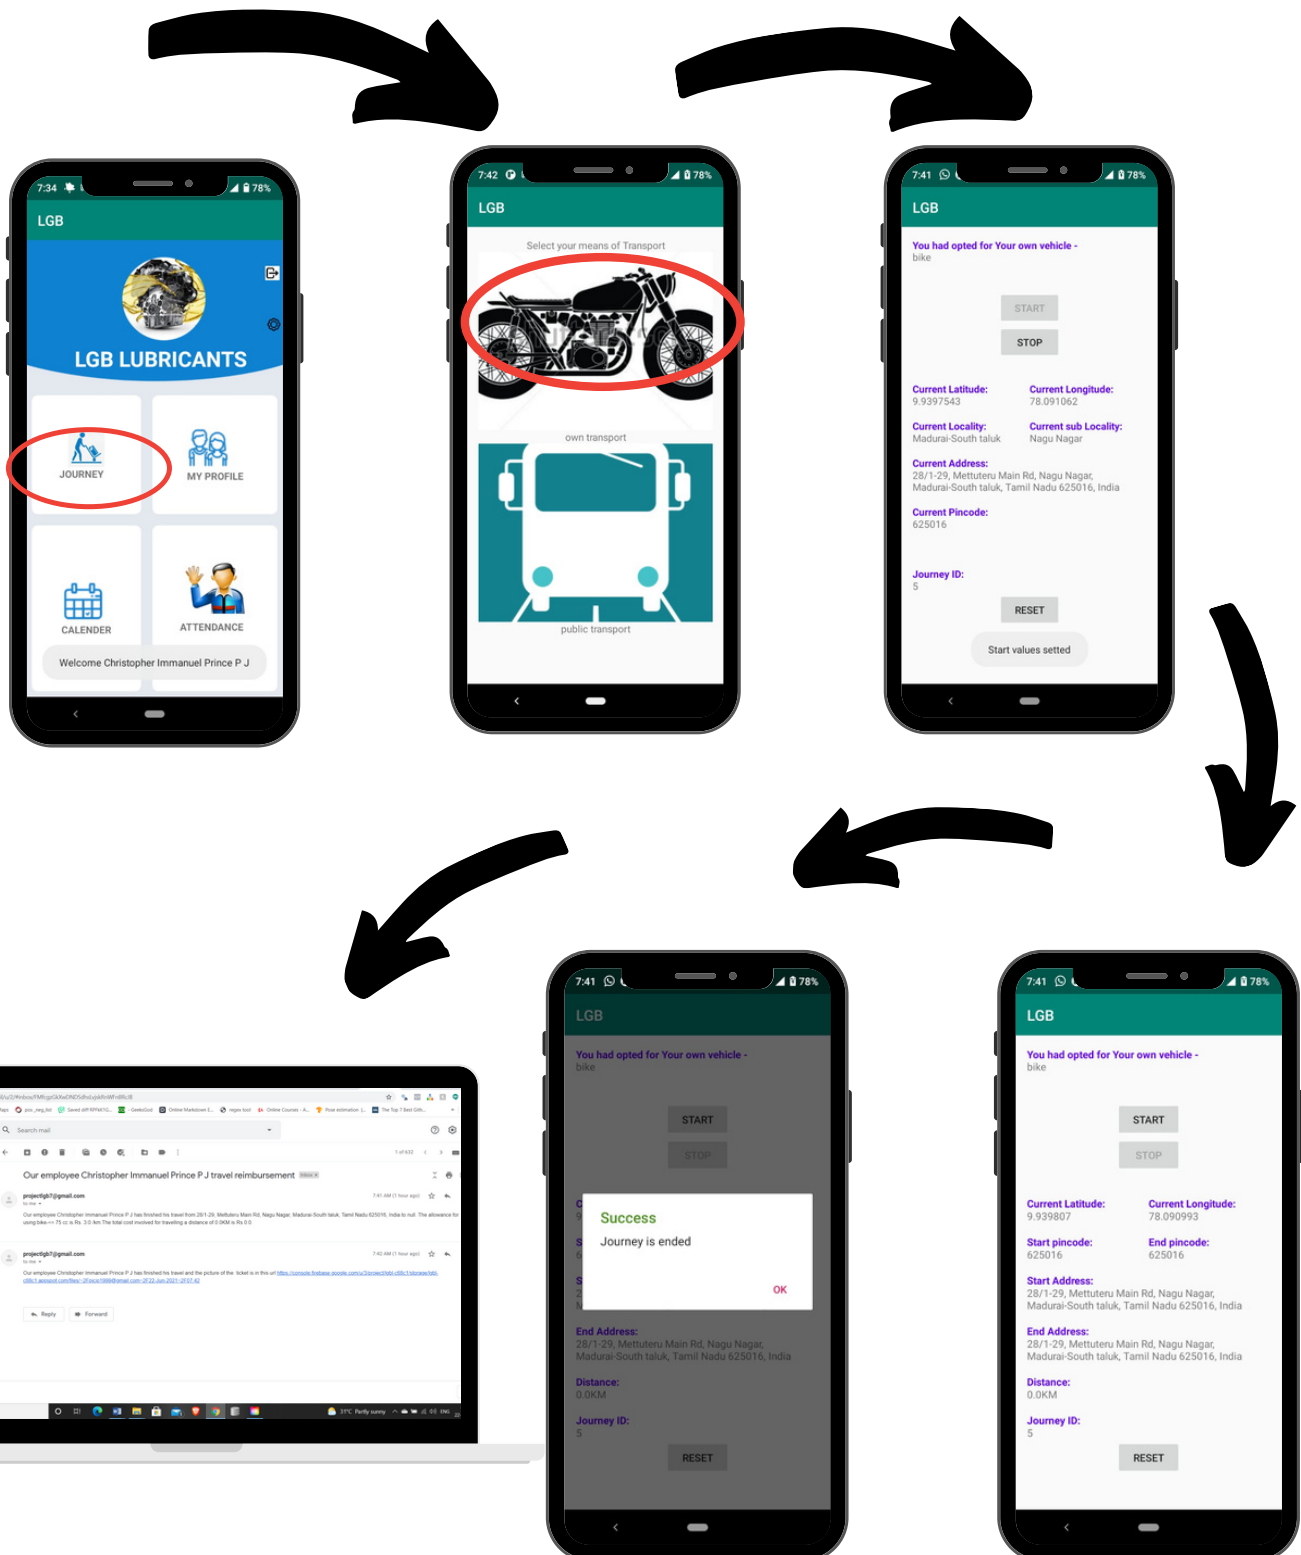

On leaving same procedure is followed

## 6) Journey Tracking app

### 1. Own transport:

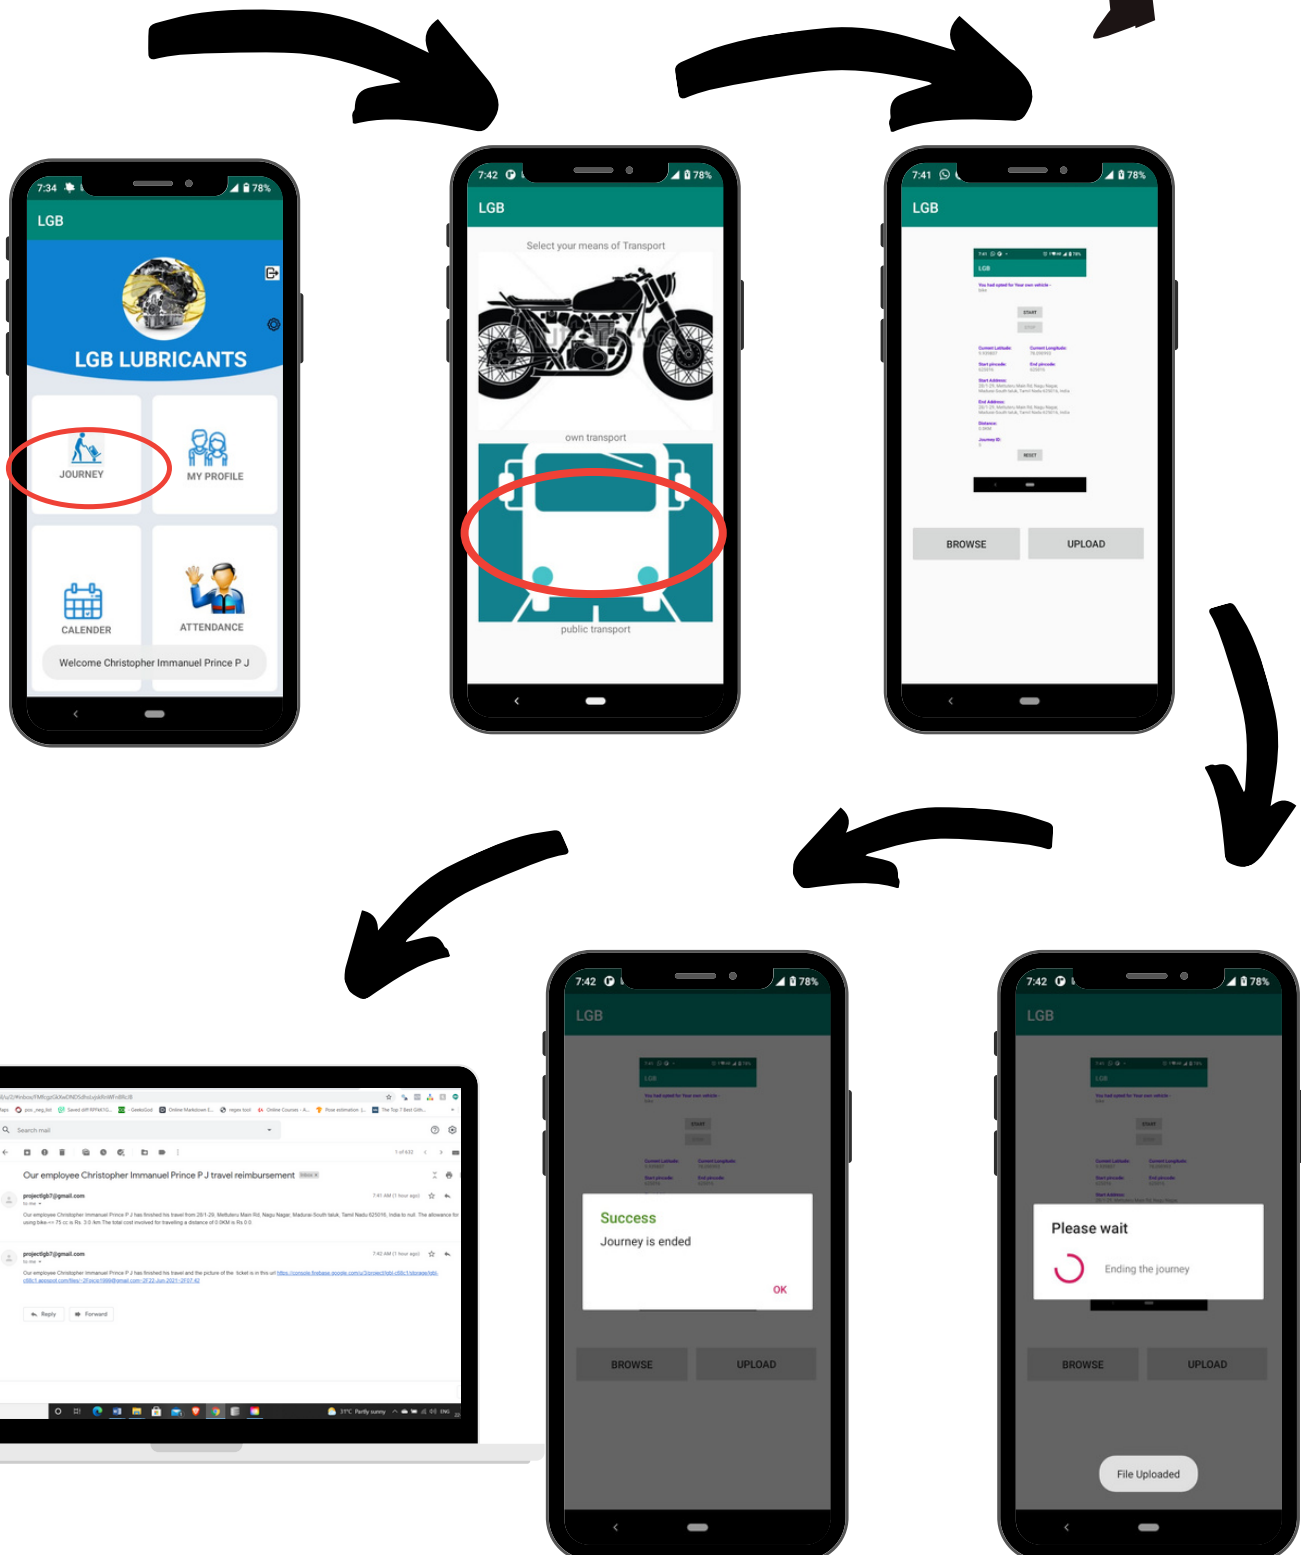

- Here, the source and destination of the journey are triggered with the start and end button page.
- With the source and destination latitude and longitude distance and travel, allowance is calculated.
- Further, these details are mailed to the admin.

## 6) Journey Tracking app

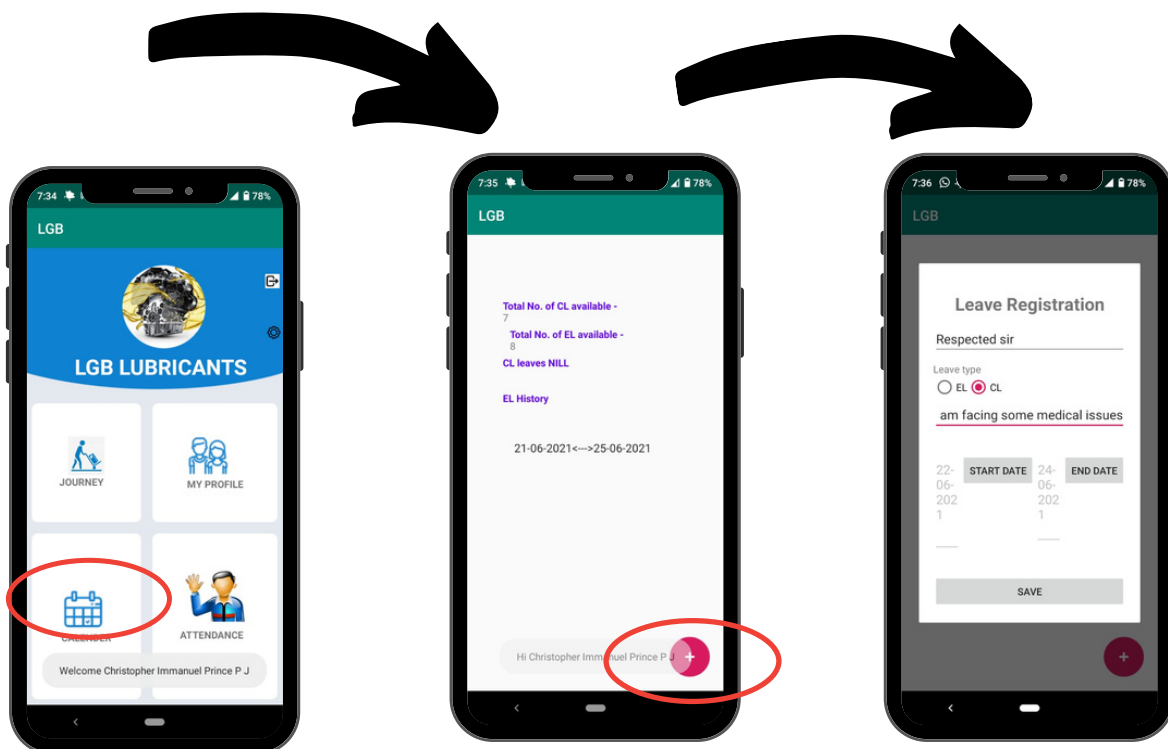

### 2.Public transport:

- Here we could upload the image of the ticket to the firebase storage.
- Further, the details are mailed to the admin with the URL specifying the location of the ticket in firebase storage

## 7) Leave Tracking Feature

- The leave tracking feature fetches the EL and CL available for that person along with the history of leaves taken.
- With the Floating action button at the right bottom, anyone can apply for leaves with subject, reason, start and end date of the leave only in case there exist availability.
- With start and end date provided, the difference is automatically calculated and updated to firebase

## 8) Network Listener

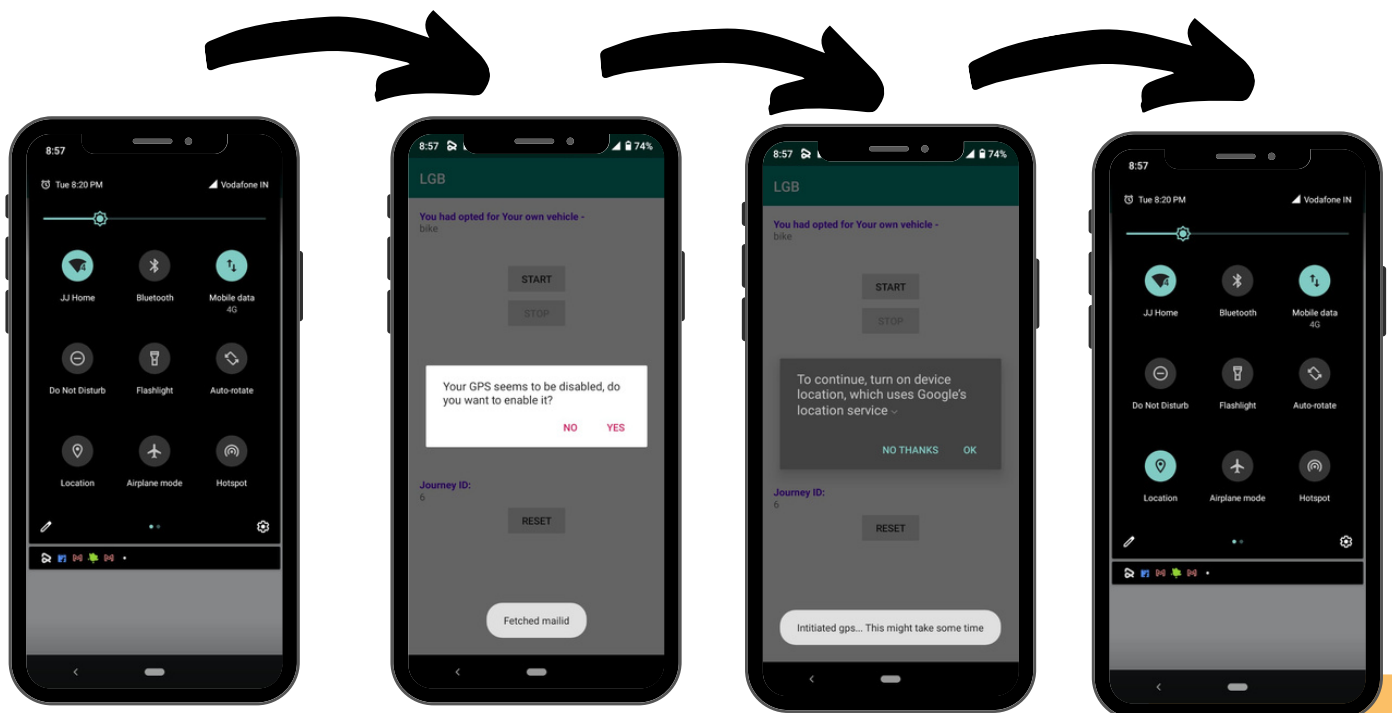

- Finds whether the device is connected to the network
- If not prompts and shows an alert box.
- If the internet is connected click retry to check whether you had regained the access in the device.

## 9) Location Listener

- Finds whether the device is connected to the GPs
- If not prompts and shows an alert box.
- It also asks for consent to switch on the location.

**Disclaimer:** Its always better to start the day with location on.  
**Reason:** It takes on an average Of 10 minutes to get the GPS connection. This latency might differe from device to device.

## Deployment plans:

- For now, we use a realtime database and cloud storage of firebase which is a kind of free version here is the pricing plan to know how far the account is considered as free version. [view firebase pricing](#)
- The cloud storage and real-time data base are deployed with securities such as only the person with authentication created while signing up could have access of reading and writing data's to the database and cloud storage with our application.

## Where can I find the app and codebase?

- Click this [link](#) and select the latest version app. You could see an option **view raw** click it to download the app.
- Click this [link](#) to view the codebase.

## Tool used:
